June 26, 2022

Dear Pavlo Yuriiovych!

As a result of Russian military aggression, many Ukrainian areas are covered with unexploded shells. These munitions are totally dangerous for everyone. The sharpest question of demining is about large mined agricultural areas that were planted with winter cereal crops in 2021. Harvesting on this territory is impossible on these territories in Ukraine. The risk of shell explosion is very high. It is impossible to decrease danger levels for people and the environment through available forces and efforts together with traditional methods.

For sped-up intelligence and sufficient demining of these areas due to progressive techniques, the Interregional center of humanitarian demining and rapid response of the State Emergency Service of Ukraine asks the UA SALIVATION charity organization and fund for help. It is critically important to purchase the following equipment:

- The quadcopter of the infrared range of action - 1 item;
- Supplementary batteries for the quadcopter - 4 and more items;
- The car charger for the quadcopter's battery - 1 item;
- A set of additional screws - 4-5 sets;
- Supplementary batteries for the quadcopter in use (Dji Air 2S) - 4 items;
- A set of additional screws for the quadcopter in use (Dji Air 2S) - 4-5 sets;
- The car charger for the battery of the quadcopter in use (Dji Air 2S) - 1 set;
- The electric gas generator (portable) with the power up to 2 kW - 1 unit;
- The PC (laptop) with sufficient calculation, estimating, and analytical properties - 1 unit;
- The 24" monitor (and bigger) with the pixel rates no more than 0.28 and the MVA or IPS matrix type - 2 items;
- The foldable table with chairs to arrange the workspace - 1 item.

With respect,

the Chief of Interregional center of humanitarian demining and rapid response of the State  
Emergency Service of Ukraine, Colonel of civil protection service Volodymyr Lavryk
